

# 'SAFECODE'

## CLINICAL TRIALS Code Break System

Specifically Designed for the Pharmaceutical Industry

Label Printers, Applicators, Software,  
Consumables and Maintenance

'SAFECODE' is a unique *Code Break System* specifically designed for clinical trials which allows confidential blinding information to be printed using standard office printing technology.

The confidential drug data is illegible unless the tamper evident strip is removed. This ensures that any effort to compromise the security of data is immediately apparent.

Un-Blinding 'Safecode'

Blank 'Safecode'

### HOW IT WORKS...

1. Print directly onto the 'SAFECODE' including the DRUG or PLACEBO details.
2. Split the 'SAFECODE' at the perforation and keep one half for your records, the other half with the blinded data is sent to the trial centre/hospital .
3. In an emergency simply un-blind by peeling back the 'SAFECODE' to reveal the drug data.

### Benefits of 'SAFECODE'...

- Auditable Process
- Easy to use
- Professional Image
- Uses Standard Printers
- Secure Process
- High Quality Print
